Update on Good Shepherd Rehabilitation Network Therapy Programs

03/12/2014

Inpatient and Outpatient Care

 Good Shepherd provides inpatient and outpatient care at 49 locations. This includes 36 locations in the greater Lehigh Valley and 13 locations at Good Shepherd Penn Partners in Philadelphia.

Facts about Good Shepherd

- Number of people treated by Good Shepherd annually: 62,000+
- 31 Outpatient physical rehabilitation sites with 21 in the Lehigh Valley and 10 in Philadelphia.
- 4 inpatient rehab hospitals: GSRH Allentown, GS at Pocono Medical Center, GS Pediatric Unit, Penn Institute for Rehab Medicine. Contract with other hospitals also.
- In 2011 charitable care was \$7.751 million

Interactive Metronome

- IM technology works by challenging the patient to improve the brain's timing and processing skills through the use of wholebody exercises in the presence of a computer generate beat. Patient attempts to match the rhythmic beat with repetitive movements.

EKSO with Variable Assist

- Used with patients who had a stroke or other neurological conditions (including incomplete SCI) and have hemiparesis – partial paralysis of lower limbs or limbs).
 Battery powered motors drive the legs and replace neuro muscular function.

EKSO

- Ekso allows a person with lower-extremity paralysis or weakness (spinal cord injury or MS) to stand and walk through a series of sensors that work with a gesture-based interface that detects the user's intentions.
- The battery-powered, on-board computer then commands motors at the hip and knee joints to move the legs through a smooth, natural gait.
- Patients must use crutches or a parallel bar for balance.
- Good Shepherd's therapists are specially trained in the use of the Ekso as part of therapy plans or for patient maintenance programs
